

-FS is the traffic stick relay which is picked up when traffic is set up in the direction for which signal is to be cleared.

Note - See SES-37 for extra circuit controller arrangement.

DG wire to be connected to left polar contact when normal position of Relay holds Signal at 45°
 * 17 or 18 cells may be used where necessary due to low temperature, etc.

LOCAL WIRING FOR 3-POS. STYLE T-2 SIGNAL WITH POLARIZED CONTROL
